

Project Overview

This project presents a cohesive visual design for a Ramadan Mehendi event, focusing on two key elements: the entrance gate and the main stage. Both elements are designed to complement each other through consistent use of color, lighting, and pattern language creating a unified festive atmosphere.

Grand Welcome

The front view captures the gate as the primary visual identity of the event. The symmetrical structure creates a sense of balance and formality, while the green and gold palette immediately sets a festive and cultural tone. This shot is intended to represent the first impression guests experience upon arrival.

Depth & Structure

This perspective highlights the physical depth and layered construction of the gate. The side angle reveals textures, edges, and material transitions that are not visible from the front. It adds realism and helps the viewer understand the spatial design more clearly.

Organized Elegance

From above, the gate takes on a more geometric and organized form. The layout appears structured and intentional, reflecting careful planning. This view emphasizes alignment, spacing, and how the design integrates into its surroundings.

The Celebration Core

The stage front view focuses on the central area where the main event takes place. The design draws attention to the seating and backdrop, creating a focal point that feels warm, inviting, and festive. The composition is balanced to ensure visual clarity while maintaining richness.

Atmosphere & Layers

This angle captures the environment surrounding the stage, including lighting falloff, decorative layers, and spatial depth. It helps communicate how the stage interacts with its surroundings, enhancing the immersive experience.

Structured Minimalism

The stage front view focuses on the central area where the main event takes place. The design draws attention to the seating and backdrop, creating a focal point that feels warm, inviting, and festive. The composition is balanced to ensure visual clarity while maintaining richness.

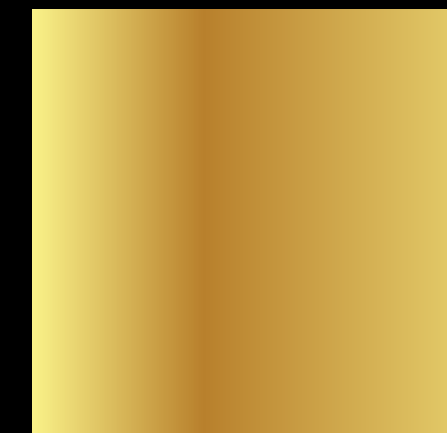

Color Theory

This palette is built using four key elements:

#073b23 (Deep Green), #027b3e (Vibrant Green), their Gradient, and Gold accents.

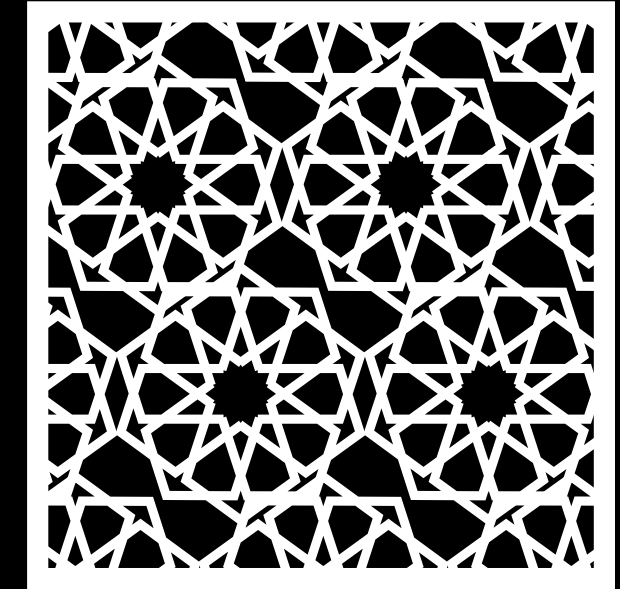

- **#073b23** acts as the base, providing depth, contrast, and a premium, calm backdrop.
- **#027b3e** adds freshness and energy, reflecting the natural and celebratory essence of Mehendi.
- The gradient (**#027b3e ,#073b23**) creates smooth transitions and adds visual depth, making the design feel more dynamic.
- **Gold accents** highlight key elements, bringing a sense of elegance, warmth, and festivity.

Together, this combination balances tradition with a modern, refined look.

Pattern Language

Inspired by traditional Islamic geometry, the patterns create rhythm, symmetry, and visual harmony. Their repetition across the design enhances depth and cultural identity, while subtle contrasts and golden highlights add elegance without overwhelming the composition.

Thank You!
